Experiment no:-5

Title:- :Write a program to check whether a year is a leap year using if-else

1. Write a program to check whether a given number is positive, negative, or zero.

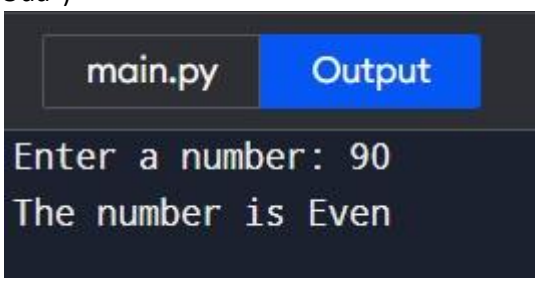

```
num = int(input("Enter a number: "))

if num > 0:
   print("The number is Positive") elif
num < 0:
   print("The number is Negative")
else:    print("The number is
Zero")
```

2. Write a program to check whether a given number is even or odd num = int(input("Enter a number: "))

```
if num % 2 == 0:
   print("The number is Even")
else:    print("The number is
Odd")
```

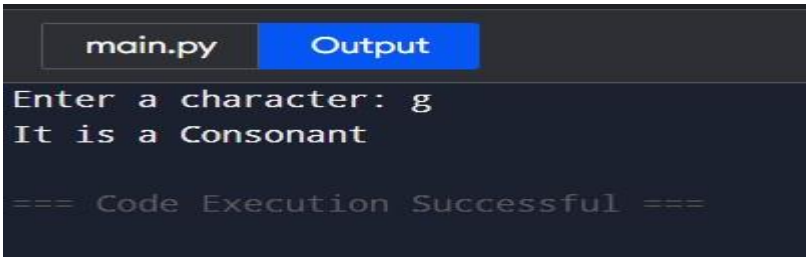

3. Write a program to check whether a given character is a vowel or consonant. ch =

   input("Enter a character: ").lower()

```
if ch in ['a', 'e', 'i', 'o', 'u']:

print("It is a Vowel") else:

   print("It is a Consonant")
```

4. Write a program to check whether a given number is divisible by 5 and 11.

```
num = int(input("Enter a number: "))

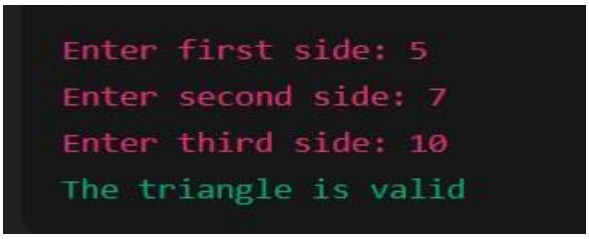

if num % 5 == 0 and num % 11 == 0:
   print("The number is divisible by 5 and 11")
else:    print("The number is not divisible by 5
and 11")
```

5. Write a program to check whether a given triangle is valid (sum of any two sides greater than the third).

```
a = int(input("Enter first side: ")) b
= int(input("Enter second side: "))
c = int(input("Enter third side: "))

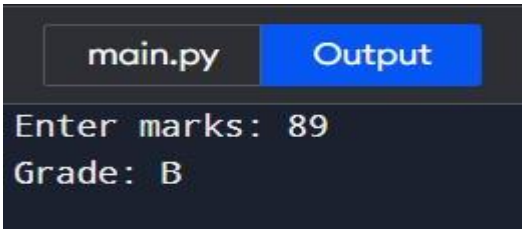

if a + b > c and a + c > b and b + c > a:
   print("The triangle is valid")
else:    print("The triangle is not
valid")
```

6. Write a program to calculate the grade of a student based on marks

```
marks = int(input("Enter marks: "))

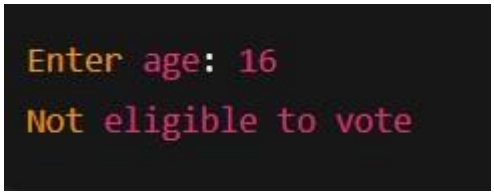

if marks >= 90:
   print("Grade: A") elif
marks >= 75:
print("Grade: B") elif
marks >= 50:
print("Grade: C") else:
print("Grade: F")
```

7.Write a program to check whether a person is eligible to vote (age ≥ 18).

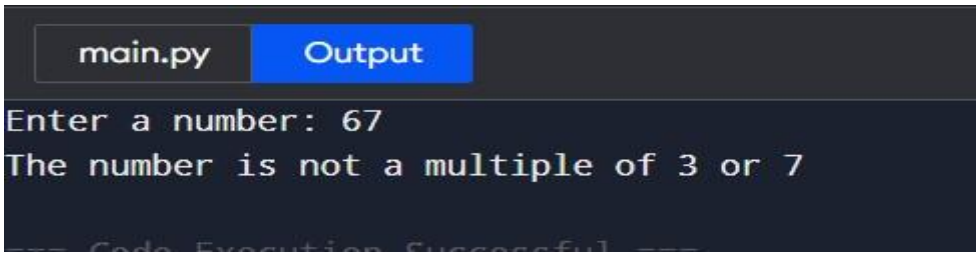

```
age = int(input("Enter age: "))

if age >= 18:
   print("Eligible to vote")
else:    print("Not eligible to
vote")
```

8.write a program to check wheater a given number is multiple of 3 or 7 num = int(input("Enter a number: "))

```
if num % 3 == 0 or num % 7 == 0:
   print("The number is a multiple of 3 or 7")
else:    print("The number is not a multiple of 3
or 7")
```

9. write a program to check wheater a a given year is a ceuntry year (divisible by 100) year = int(input("Enter a year: "))

```
if year % 100 == 0:
   print("It is a Century Year") else:
   print("It is not a Century Year")
```

```
Enter a year: 2000
It is a Century Year
```

10. write a program the given temperature is ,hot warm ,or cold temp = float(input("Enter temperature in °C: "))

```
if temp > 35:
print("It's Hot") elif
temp >= 20:
print("It's Warm")
else:  print("It's
Cold")
```
